- **Mobiserve** provides high quality field maintenance services to Telecom operators, vendors, tower companies and other entities in need for top notch field maintenance services. Our number one priority is to ensure clients' satisfaction. We are able to rapidly set up satellite offices to cover geographically any client's growing needs.
- **Our flexibility** enables us to implement well-tailored designs and technical policies, procedures and quality systems to achieve the best results.
- **Our skilled resources**, experience and long heritage in the Telecom field enable us to deal with all types of mobile communication networks equipment, with its active and passive elements.

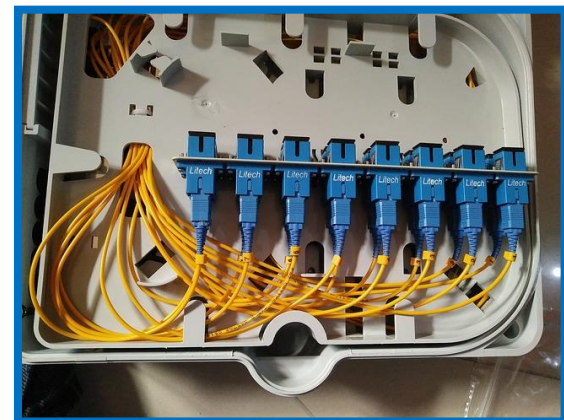

We provide Preventive & Corrective Maintenance for the following scopes:

Telecom Scope

2G, 3G, LTE and 5G, BSC / RNC, Microwave (PDH/SDH), IBS sites (radio and WIFI), VDSL

Fiber Optic

Installation and configuration, routing, systemization, Maintenance & Corrective actions

Electromechanical managed services

for all power systems rectifiers, fire systems, MOB, A/Cs, solar cells, all generators types including their state of the art overhauling.

Plumbing works

Plumbing works including all Spare parts management

Electromechanical technical Buildings maintenance

for all power systems rectifiers, fire systems, MOB, A/Cs, solar cells, all generators types including their state of the art overhauling.

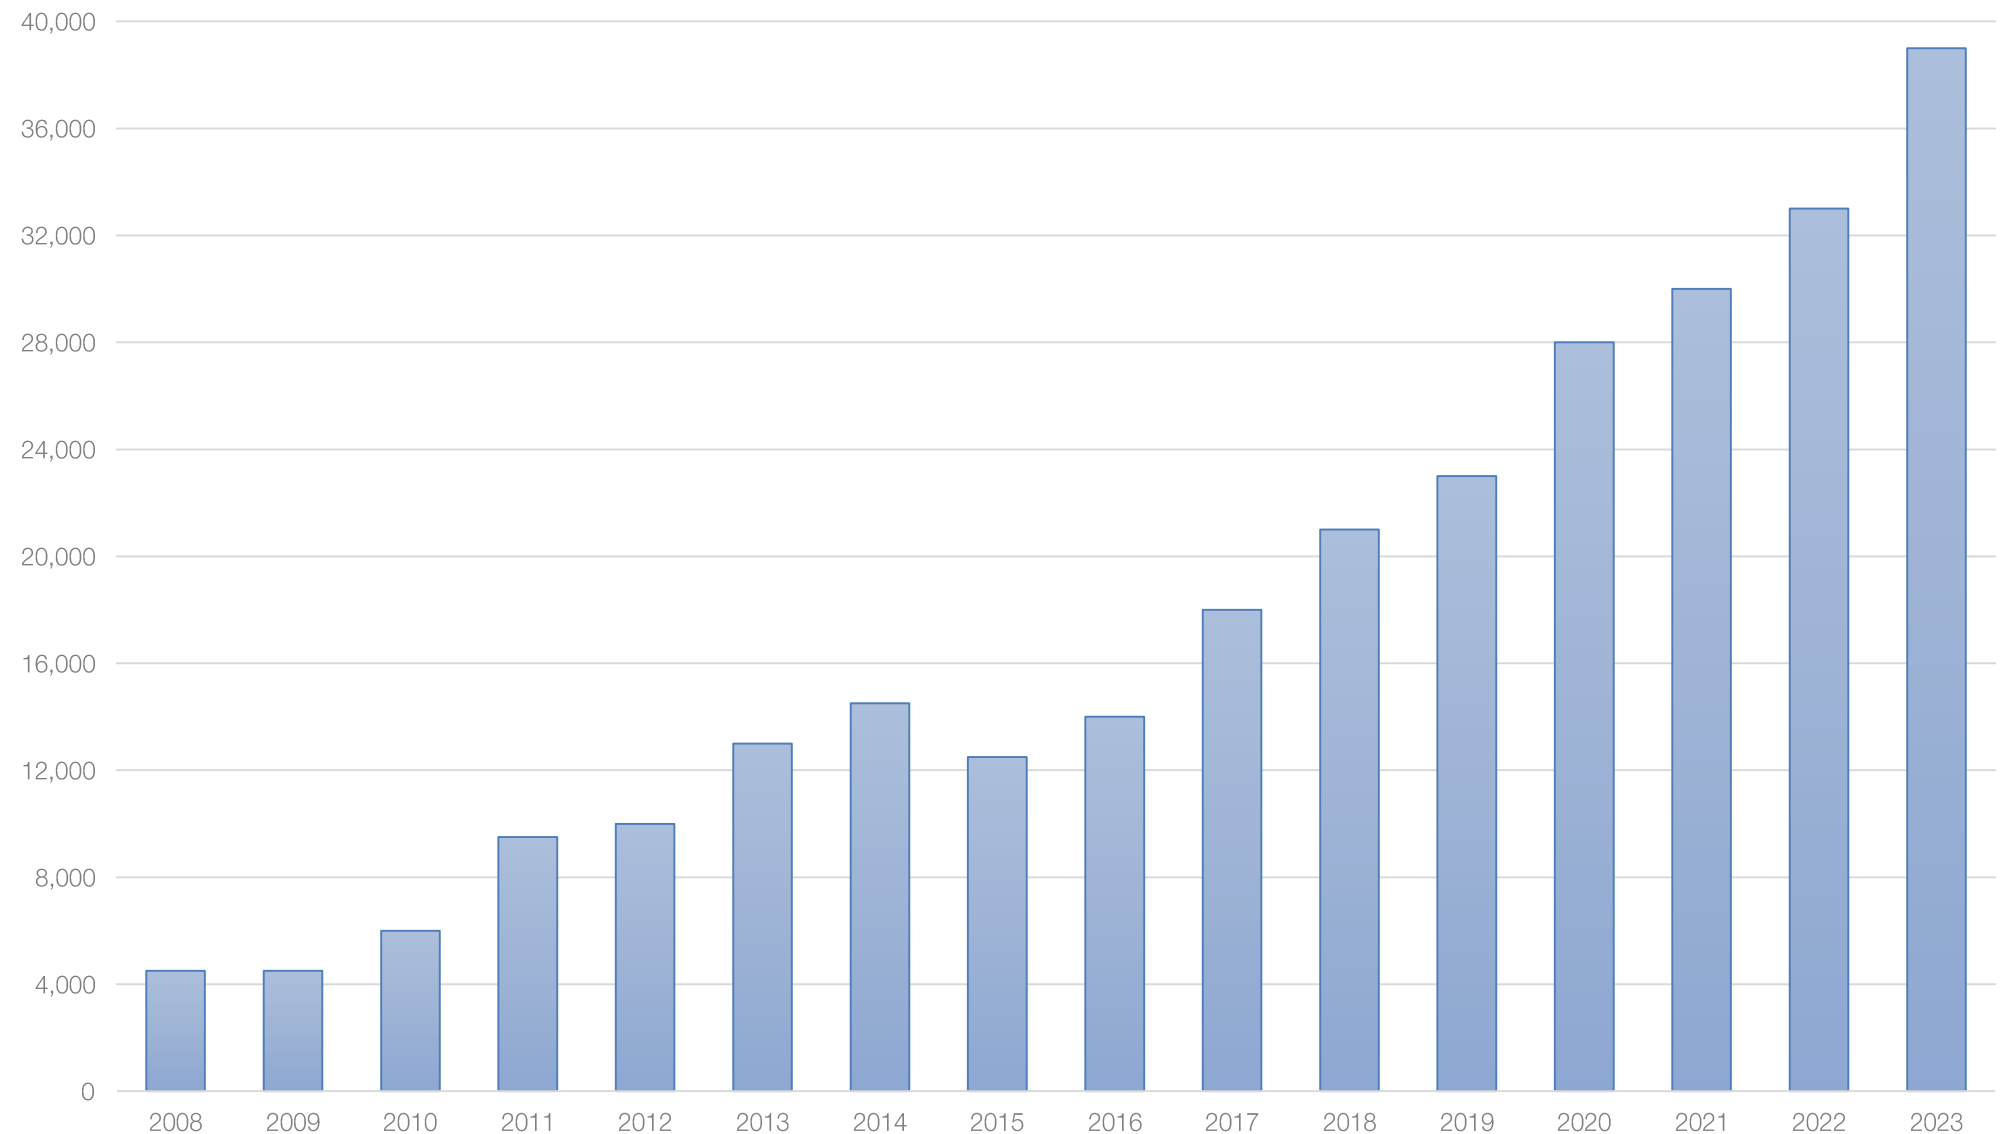

Solar energy

for both off-grid and on-grid plants and Hybrid controllers and solutions

Working in two continents; in harsh weather conditions or crowded cities, and important events, we are there to offer our services and support

- You will find us in the monsoon season in Pakistan.
- You will find us in the great Hajj season in KSA.
- You will find us working under continuous rainy showers in Tunisia.
- You will find us in the snow season on the mountains of Algeria.

TELECOM ROLLOUT

- For more than 24 years Mobiserve has been the trusted partner by major Telecom operators and vendors in the MENA region to build their networks
- Mobiserve has been always ready to deliver reliable solid rollout for the Telecom sector in minimum time and highest quality
- The main aim was to enable operators/vendors to focus on their main business, while offering end to end solutions within hassles/hazards free environment

TELECOM ROLLOUT ACTIVITIES

Telecom Site surveys

Permanent power and generators systems installations

Civil work implementation for access network sites

Telecom Site Acquisitions

Tower/Pole installations

Air Conditioning Systems installations

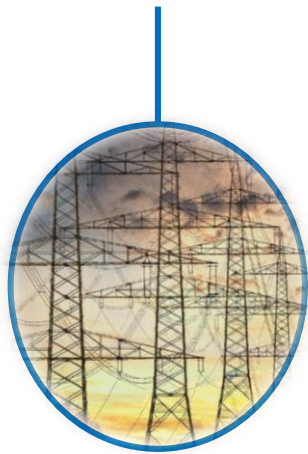

Fire Fighting Systems installations

RF rigging works

In-door Building Solutions CW

Telecom Engineering activities that could be integrated in any rollout programs includes but not limited to the following activities:

Antenna and microwave installation services

Network equipment swap out programs

Network support services

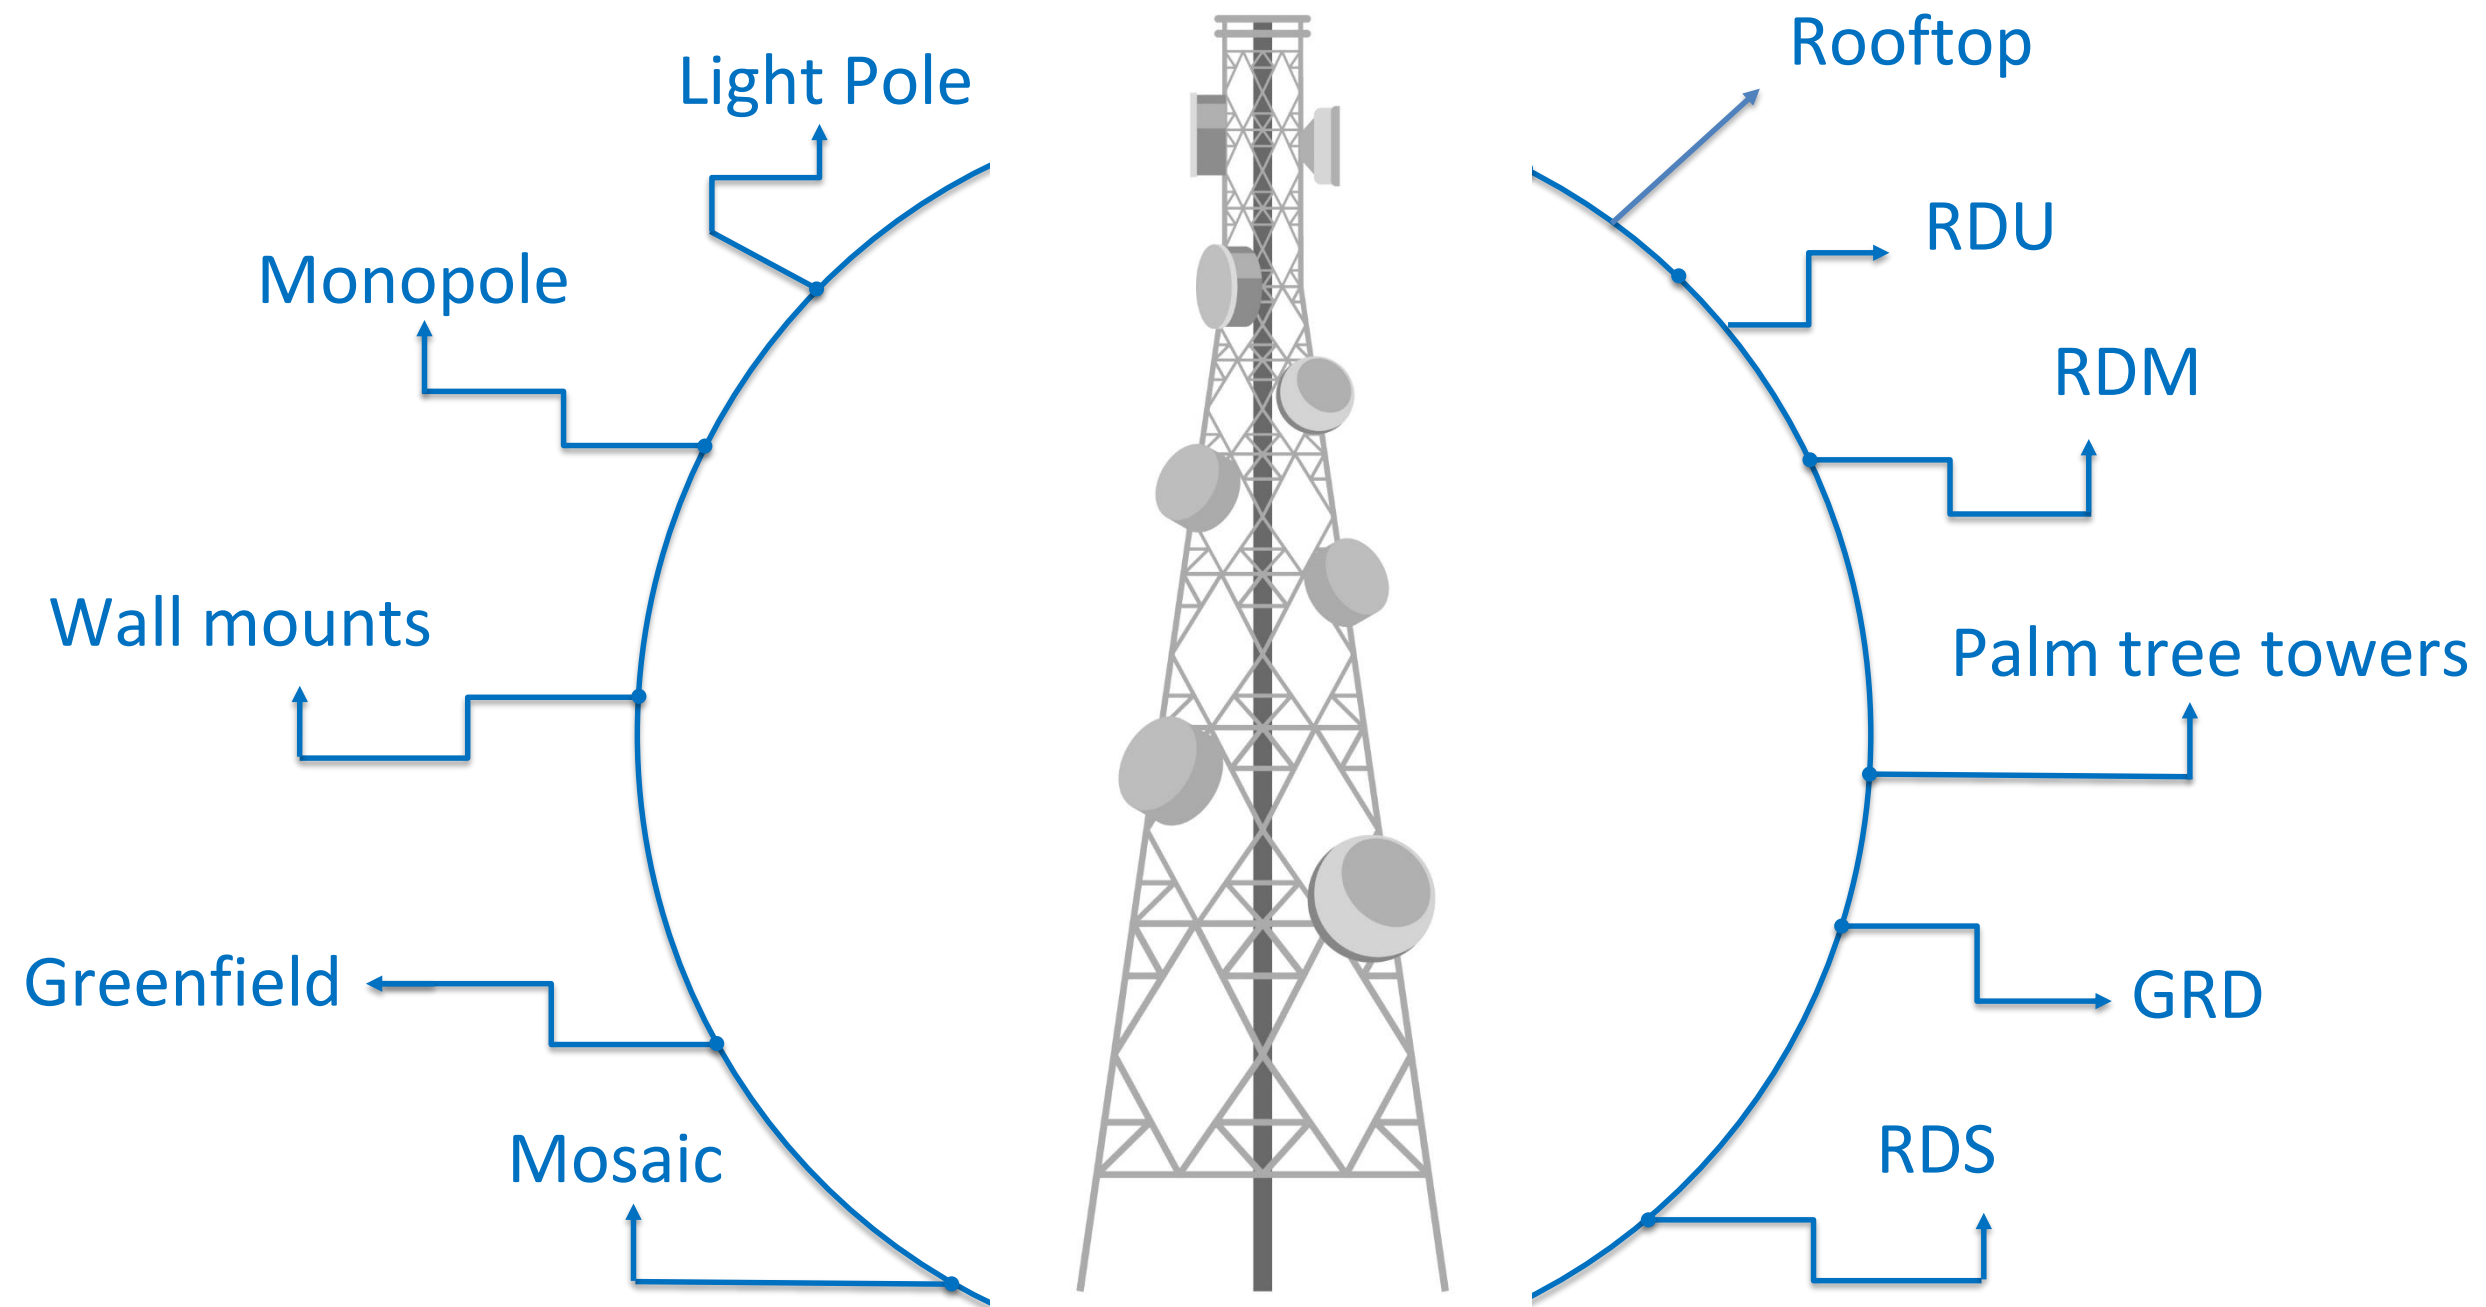

Network equipment installation and commissioning

Core switching services

Our Focus is mainly on Health, safety and quality in addition to the speed of delivery. Over the years we built thousands of different types of Telecom sites including:

ENERGY & POWER SOLUTION

Mobiserve is able to deliver turnkey energy solutions to provide power to different types of facilities:

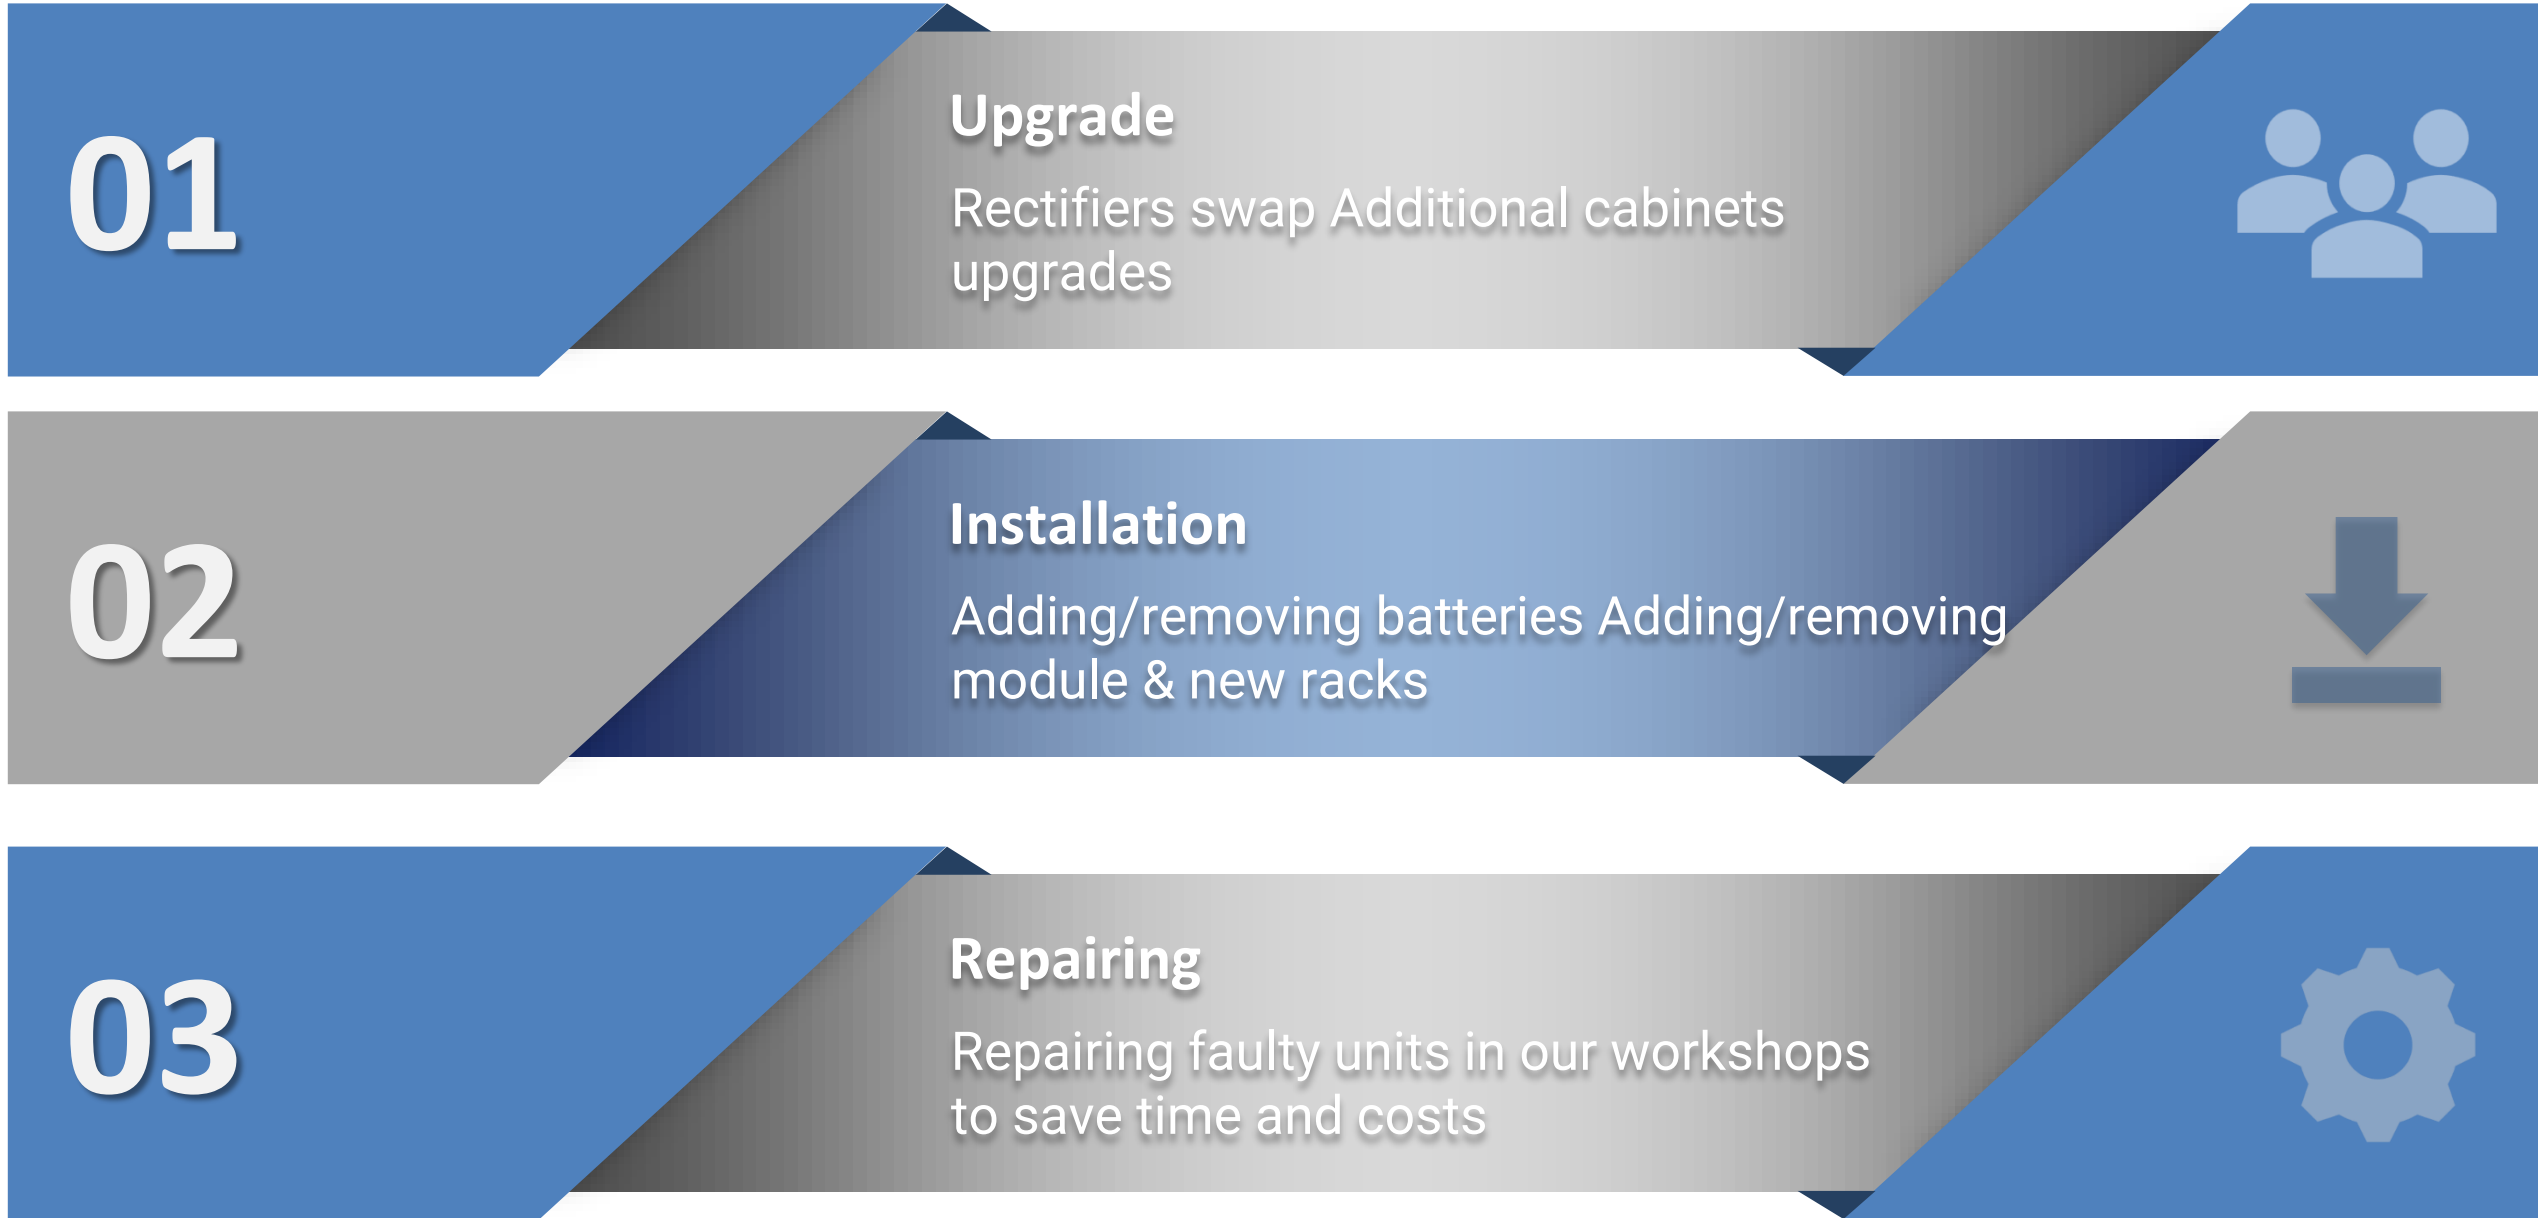

- Installing and maintaining turnkey Solar power systems
- Installing and maintaining hybrid power systems combining both solar power systems and Generators to charge batteries adequately to run sites 24/7, with ability to control the hybrid systems to switch between different power sources (Grid, Generator, Batteries and Solar system) to save power consumptions based on configured parameters

Our Solutions have the ability to monitor and control access and provide security surveillance.

- Ability to monitor all site parameters remotely and do required analyses to be ready for any corrective and preventive actions on time without waiting for routine physical checks

For DC full power solutions, Mobiserve is also able to deliver different supply, installation and upgrade activities including:

For more than 2 decades Mobiserve has been able to deliver high quality electromechanical comprehensive turnkey projects not only related to the Telecom sector but also for conventional construction projects.

Electromechanical services include the following sectors:

Indoor/outdoor security and surveillance systems including civil works/ configurations

Datacenters infrastructure installation

Fire alarm and fire-fighting systems based on all different specs/ categories

Low current activities from basic infrastructure till final finishes

Power cables and transformers installations

Power meters swap/installation/ configuration

UPS, Generator & power installations

Water treatment and naturalization

Final construction finishes

Plumbing and sanitary systems

In addition, Mobiserve offers power equipment rental like generators of well-known brands. Rental might also include full service/maintenance/fueling whenever needed.

Whenever needed the overhauling service is also available for generators including the supply of all needed spare parts and executed by our qualified in-house teams

Mobiserve offers different GPS tracking solutions:

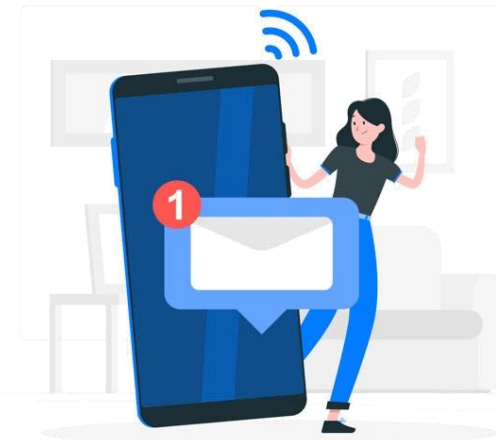

GPS tracking

Providing and installing GPS tracking system for generators and batteries to keep them monitored and protected

Location Tracking

Providing continuous location tracking in case of movement detection

Notifications

Providing 24/7 observation for all protected elements and sending notifications via email and SMS in case equipment were moved

FACILITY MANAGEMENT

High quality reliable facility management services

- Through a well-defined implementation process including all needed checklists and quality measures, Mobiserve has been able to provide high quality reliable facility management services to clients.

The service is done on two levels; preventive maintenance and corrective maintenance

Corrective Maintenance

Corrective maintenance is delivered in the shortest possible time and with highest quality to reduce downtimes to clients.

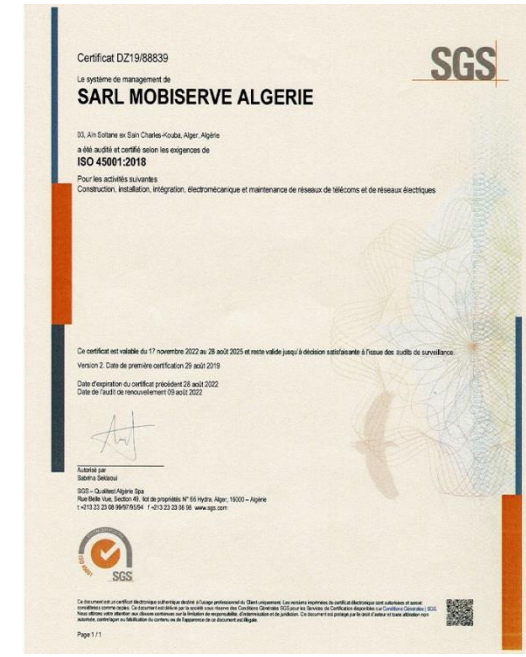

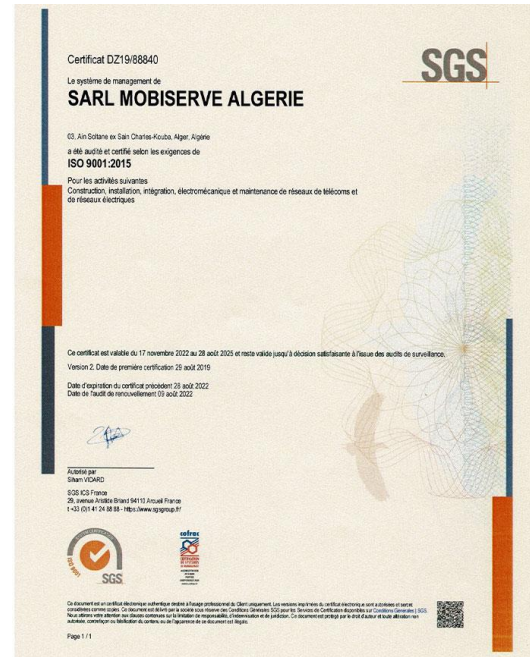

Preventive Maintenance

Preventive maintenance is scheduled on planned intervals to make sure working facilities are maintained properly to ensure business continuity and to minimize downtimes that might disturb clients' business routine.

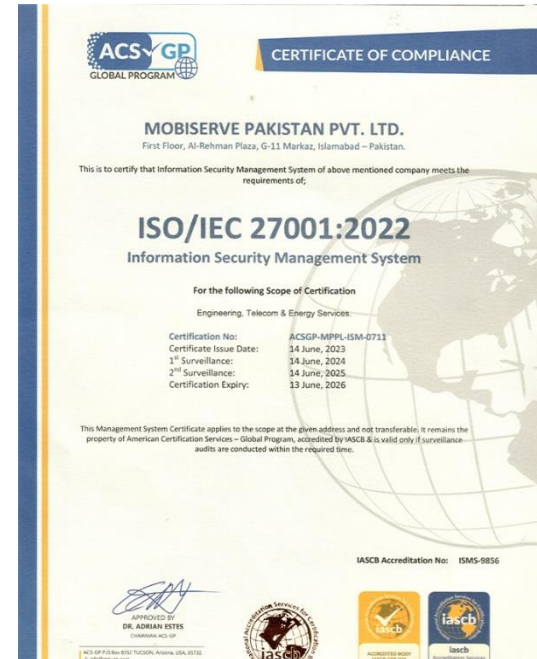

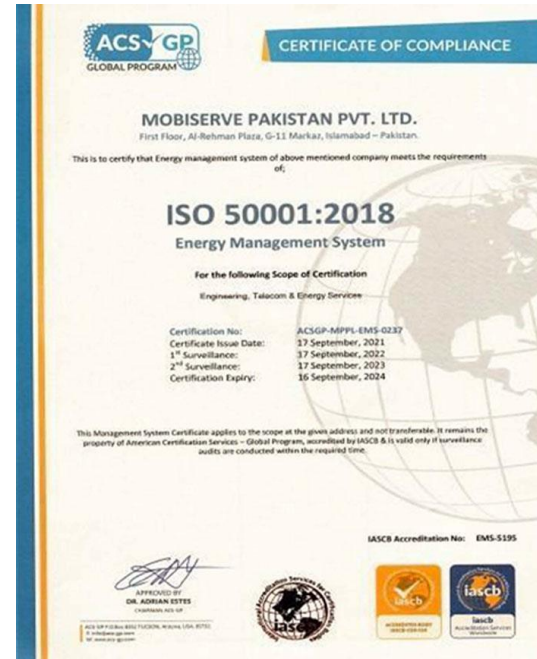

Facility management services is offered to different corporate organizations like banks, government offices, shopping malls...etc. Services are offered in the following fields:

- 01 Electrical activities starting from light current maintenance till electric fixtures
- 02 Electromechanical activities including HVAC and plumbing works
- 03 Power management systems and panel boards
- 04 Fire alarm and fire-fighting systems
- 05 Solar and hybrid power systems
- 06 Civil works
- 07 Security Services
